

Contacts Web-application

It is a Web based application that allows user to manage his personal contacts.

Web-application should be written in Javascript and PHP languages. It allows user perform following actions:

- View personal contacts in a table. Table should show first 20 contacts that is ordered by name, also pager functionality is needed to give user a possibility to view more results.
- Add, update or remove contact.

Interface should be based on Twitter Bootstrap.

Data should be saved in Mysql or Postgres database.

Each contact can have following information:

1. Name
2. Mail
3. Company
